

Equine Concepts
is proud to be:

GATORSHIELD STEEL TUBING

Steel Tubing that Outperforms and Outlasts

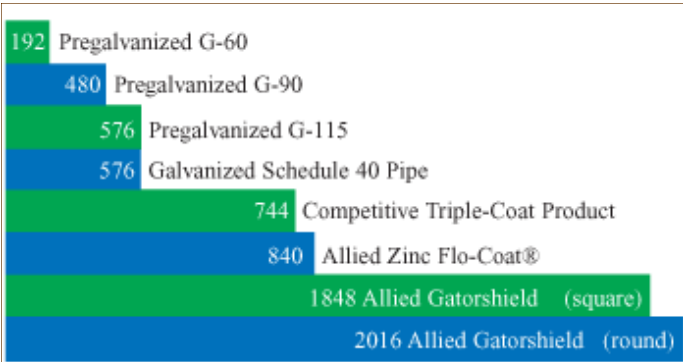

Gatorshield is a patented triple layer Flo-Coat® rust and corrosion resistant product protection that has demonstrated to be the best over the long haul versus all competitive product offerings. When rust and corrosion protection is needed - Gatorshield is "Gator Tough." In addition, the zinc interior coating provides the inside of the tube with maximum corrosion and rust protection. Inside and out - Gatorshield is the best - and has been the best product choice for over 30 years.

Gatorshield is a step above the traditional Flo-Coat product, demonstrating a thicker layer of zinc protection for extended longevity in highly corrosive environments. Best of all, Gatorshield is processed utilizing 99.99% pure zinc alloy with significantly less harmful lead content than generally encountered with pregalvanized or hot-dipped products. This means that lead oxide fumes during welding are kept to an absolute minimum.

Gatorshield's meets a minimum strength characteristic of 50,000 yield/55,000 tensile, reaching a maximum of 60,000 yield/75,000 tensile.

Compared to the alternatives, Gatorshield performs extremely well in terms of fabrication properties:

SALT SPRAY TEST— GALVANIZED PRODUCTS (First sign of red rust - no. of hrs.)

- Conducted in accordance with ASTM-B-117 standards. All tests conducted by Scientific Laboratories, Inc., Chicago, IL.
- Gatorshield triple coat protection is used exclusively for all 50/55, 60/75 and RS-20/RS-40 recreational/Structural Steel Tubes.

- Compression ring of the Equine Concepts Equi-Cover.
- All of the Equi-Cover structures are crafted using GatorShield steel tubing for optimum protection and strength.
